

Illustrate an example to create a table  
student table will contain the following  
attributes Stdid, Stdname, dob, doj, fee, gender

```
CREATE TABLE STUDENT (Stdid int(5), stdname  
varchar(20), dob date, doj date, fee int(5)  
gender varchar(20));
```

```
DESC student
```

```
INSERT INTO student (Stdid, stdname, dob,  
doj, fee, gender) VALUES
```

```
(1, 'SHAR Thor', '2001-01-10',  
2000-10-05, 10000, 'M');
```

```
INSERT INTO student (Stdid, St  
(2, 'LOKI', 2019-11-3, 2001-10-20,  
11000, 'M');
```

```
ALTER TABLE student Add Phone_no int
```

```
ALTER TABLE student Rename To student-info
```

```
SELECT * FROM student-info;
```

```
ALTER TABLE student-info. DROP COLUMN  
gender;
```

```
DELETE FROM student-info WHERE Stdid=
```

Output:

~~Column Name~~

~~Stdid~~

~~INT~~
